Login to the shell account with SSH

kill the currently running psybnc process by typing **ps -x** to find the PID#

then **kill -9 PID**

cd psybnc

pico -w psybnc.conf and edit the following line

USER1.USER.PASS==(encrypted stuff) set unencrypted password and remove the = sign,
like: USER1.USER.PASS=mysecretpass

start your psybnc by typing **./psybnc** in the psybnc directory

psybnc will encrypt the password when it starts.
