Create **/etc/yum.repos.d/solusvm.repo** with the following content:

```
[soluslabs]
name=Soluslab Repo
#baseurl=http://repo.soluslabs.com/centos/$releasever/os/$basearch
mirrorlist=http://repo.soluslabs.com/centos/mirrors-soluslabs
gpgcheck=0
enabled=1
```

then run **yum install vždump** and youâ€™re set.
