---

When login to CentOS 8 using SSH, you get a message asking you to enable web console.

Activate the web console with: `systemctl enable --now cockpit.socket` 1

```
boby@sok-01:~$ ssh root@192.168.1.90
Activate the web console with: systemctl enable --now cockpit.socket

Last login: Sun Sep 29 15:05:52 2019 from 192.168.1.2
[root@localhost ~]#
```

You can uninstall cockpit with command

`yum remove cockpit*` 1 yum remove

If you just need to disable the message, delete the file

`rm -f /etc/motd.d/cockpit` 1 rm -

This is actually a symlink to file `/run/cockpit/motd`
